Know The Key Facts Of Solar Sign Lights

# ARCHASOL

Are you finding appropriate lights for illuminating signs in remote locations? You can shop for solar sign lights online. They can be also used for places where involving mains electric power is so costly or nearly impossible.

Especially, businesses or commercial companies can use solar sign lights for marketing or promotion of their brand. We would say that they are great and a cost-effective alternative to trenching cables which is comparatively costly. Along with commercial purposes, these lights can be used for residential or neighborhood signs, for internal or external illumination.

Commercial quality, solar powered overhead LED sign lights with tailored light settings are suitable for different locations. They are widely used for real estate sign lights and illuminating poster cases, noticeboards and billboards at night where accessing mains power is quite difficult.

All you just need is to hire a professional supplier that can meet your needs and budget. Make sure these solar lights are backed by warranty and time technical support. If you are confused about choosing the right light for you, seek the assistance of their professional sales team. They will help you determine what system will work best for your sign.

## Key features of solar sign lights-

Easy installation- You just need to mount the back plate to any flat surface with tamper resistant screws.

No trenching costs- You don't need to bother about trenching costs for electrical wires as lights remove all trenching and all wiring.

No above-ground cable runs- These sign lights don't require any cables to operate. This is the plus point of this amazing technology.

# ARCHASOL

Customizable light settings- You can set both the light output and operating time according to specific applications or local conditions.

Compact design- Unlike most solar lights which rely on a single, small round or square low-cost solar cell, the PV cells in these sign lights are positioned along the entire length of the unit. They are specially intended to create dependable, bright light output that lasts for days, not hours.
